

MEDIA RELEASE

Successful demolition at Northern Power Station site today

17 May 2017

A coal conveyor section known as Tower G, and the adjacent Economiser 2 structures at the Northern Power Station site in Port Augusta were safely and successfully felled - as planned - at 8am this morning (17/5/17)

Staff and contractors remained off site while a small team of charge-felling experts controlled the activity. Localised dust was visible immediately following the felling and the local community had been advised of the likelihood of this prior to today's event. The dust dissipated quickly and low winds preventing the spread of dust over the town. The real-time dust monitors did not show any increased level of dust off site following the event.

Flinders Power would like to thank alliance partner McMahon Services Australia, Precision Demolition and emergency services personnel involved in the planning and execution of the felling.

Coal Conveyor Tower G and Economiser 2 structures being felled
